Experiment 4

Aim

To apply UI design principles and create reusable components using Figma components and libraries.

Learning Objectives

Students will learn:

- Basic UI design principles.
- Component creation.
- Asset management.
- Reusing design elements.

Software Requirements

- Figma

Theory

UI Design Principles

1. Consistency

Maintaining similar colors, fonts, and layouts throughout an application.

2. Alignment

Arranging elements properly to improve readability.

3. Hierarchy

Highlighting important information using size and placement.

4. Simplicity

Creating clean and easy-to-use interfaces.

Procedure

Step 1: Set Up the Canvas and Frames

- Create a new file in Figma.
- Draw two identical rectangular frames on the canvas.
- In the Layers panel on the left, name the first frame front-card and the second frame back-card.
- Select both frames and apply a dark navy blue background color with rounded corners.

Step 2: Design the Front Card Typography

- In the front-card frame, add the main title text "MAA MODHESHWARI" in a bold, yellow font at the top left.
- Add the subtitle "TRAVELS" directly below it in a smaller yellow font.
- At the bottom left, add a "SERVICES" heading in yellow.
- Below the heading, add the service details in white text: "Service: AC & Non-AC Cars, Tempo Travellers, and Buses available on rent. Bombay Airport Dropping & Pickup".
- Below the services text, add an "ADDRESS" heading in yellow, followed by the white text: "Add. 2/A Raghuvir Socity , Opp Old Bombay Market , Surat , Gujarat - 395010".

Step 3: Add Front Card Contact Info and Graphics

- Create a pill-shaped button at the top right of the front-card using a yellow stroke outline.
- Inside the button, add a small user icon and the text "Proprietor" in yellow.
- On the left side (above the services section), create a square with a white background and rounded corners to hold the "MAA MODHESHWARI TRAVELS" logo.
- To the right of the logo, add the name "Dipakbhai Postiwala" in bold white text.
- Below the name, create three stacked rows for contact details, using yellow icons for a phone, an envelope, and the Instagram logo.
- Add the corresponding white text next to each icon: "+91 9624742600", "maamodheshwaritravels66@gmail.com", and "maa_modheshwari_travels".

Step 4: Design the Back Card

- Copy the "MAA MODHESHWARI TRAVELS" header block from the front card and paste it at the top left of the back-card.
- Create a pill-shaped button at the top right with a yellow stroke outline, containing a QR icon and the text "SCAN".
- In the upper center of the card, place a multicolored "Google" text logo, with the text "Check us out on Google" in yellow immediately below it.
- In the center of the card, create a large rectangle with a slightly lighter blue background and rounded corners to act as a container.
- Inside this container, place a white square featuring another Google logo, the text

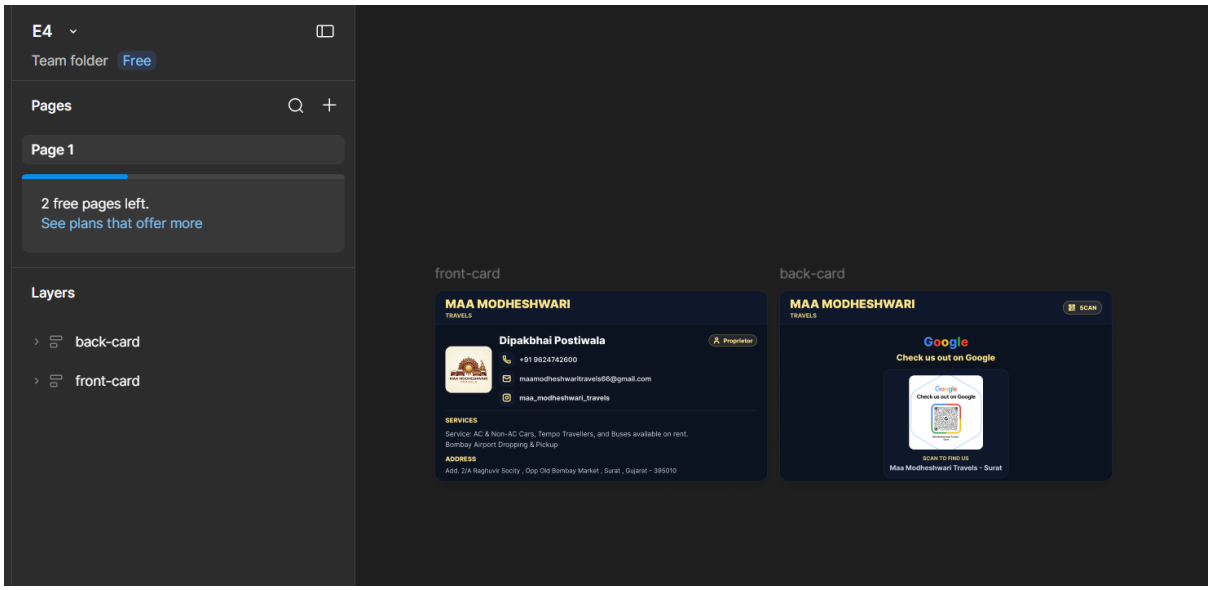

"Check us out on Google", and a scannable QR code.

- At the bottom of the central blue container, add the yellow text "SCAN TO FIND US" and the white text "Maa Modheshwari Travels - Surat".

Output :

A UI design containing:

- Front card component
- Back card component
- Reusable UI elements (such as the contact icons, QR code block, and pill-shaped buttons)

Result

The experiment was successfully completed.
